The compaſſe of England is	1532 miles
The greateſt length therof Northwards and Southwards is from Warwick to the lands end, which not croſſing the Sea is	386 miles
The ſhorteſt length from Warwick to Calſhot Caſtle in Southamptonſhire is	286 miles
The broadeſt place of England from the lands end to Sandwich is	279 miles
From St. Davids in the weſt of Pembrookſhire through the midſt of Worceſter and Warwickſhire, Eaſtward to Yarmouth in Norfolk is	240 miles
And this is the next broadeſt place in England.	
Ireland reiecting the adiacent Ilands and ſome indrafts, is in compaſſe	948 miles
The length Northward and Southw. is	303 miles
The breadth Eaſt and Weſtward is	113 miles
being taken in the Sou. parts from the utmoſt point of the continent weſtwards to the Eaſt point of Tilana lying ober againſt St. Dav. in Pembrookſh.	
The Ile of Man is in compaſſe	91 miles
The length	28 miles
The breadth	18 miles
The Ile of Wight is in compaſſe	57 miles
The length	22 miles
The breadth	11 miles
The Ile of Angleſey is in compaſſe	85 miles
The length	21 miles
The breadth	18 miles

An Engliſh mile is 8 furlongs, 88 leores, 320 pearches, 1056 paces, 1408 ells, 1760 yards, 5280 feet, 63360 Inches, 190080 barly cornes. Alſo 3 barly cornes make an inch, 12 inches make a foot, 3 foot a yard, 16 foot and a halfe make a pole or pearch. This pearch is in ſome places 18 foot, and in ſome places 21 foot, of this 40 in length and 4 in breadth makes an acre of land or rood, which is 125 paces to the furlong, every pace 5 foot.

For measuring of Corne.

Cold Ianuary loves hot cloathes,
Warm meats & broths are best,
Blood letting is unwholsome,
Warm baths excell the rest.

Day of the Moneth		High water at London Bridge.

Aprill hath xxx. dayes.

Thoſe meats are good in Aprill,
Which March deſir'd to have;
Blood letting now doth very well,
Now purging medicine crave.

May hath xxxj. dayes.

Stirre land for Wheate and Rye, set still's at work and use May dew with them, make May butter, rise early: in the end of this moneth Oakes begin to blossome, shewes much tallow and fruit, a May cold prevents a fat Churchyard.

Note that each King began his reigne at the same time that the next precedent King ended his.

THOMAS LANGLEY his Prognostication for this Yeare of our Lord God. 1639.

Winter Quarter.

WInter, the enemy to Summer, in the devouring of that which it hath provided, taketh his beginning at the Sunnes entrance into Capricorne, and lasteth till he hath made passage through the latter part of Pisces, making his greatest declination to the Southward, producing vnto vs the shortest day and longest night. This season is the most cold of all the rest; and the wether being more agreeable to its owne nature is the best, being cold and moyst; and yet ouermuch cold killeth trees in a warme region, especially the tender. A warme & a moist winter is vnwholsome, and an enemy to Husbandmen, but if that reasonable store of snow fall, it preserues the Corne, and begets plenty.

The Diseases of this Quarter, be Paulies, Gowts, Feuers, pushes in the face, paine in the eyes, the Scab, fluxes of blood, Toothach, Coughs, and such like.

The Spring

IS the comfortablest Quarter in the yeere, of nature warme and moyst; for then the Sun driueth neere the Zenith. Now the East winds blow, dispersing superfluous humors, making the earth apt and fit to bring forth all manner of things for the vse of man, beginneth at the Suns entrance into Aries, making the

dayes and nights of an equall length, endeth on the 12 day of Iune. The Spring overmoist fruit will rot, but if cold and dry Frosts ensue and endanger the Fruit.

Diseases attending on this Quarter, are Leprosies, red spots, Feavers, toothach, Ringwormes, paines in the neck & throat, small Pox, Falling sicknesse, Kings evill, wenns, griefes in Armes and shoulders.

Summer

BEginneth at the Suns entrance into Cancer, & lasteth til he hath passed through the last part of Virgo, of nature hot & dry. If Summer be overwet, Fruit will perish, sicknes abound if ouer-dry, want of Corne & graine to be feared, Fruit will be unwholsome, fishes die in ponds, and much sicknes to be feared; if cole, the quarter will bee the more wholsome, but Fruits will be subject to be rotten.

The Diseases attending on this sickly season, are pains about the brests ribs & soleen, diseases about the face, sore eyes, plurisies, heart and stomack ach, sorrow vexation, Apostumes, feavers of blood, Iaundis, pains, in the belly and secret parts, with other infirmities proceeding from melancholy blood.

Autumne, or Harvest.

THe unwholsomest quarter in the yeere, the nurse of many diseases and contagious sicknesses, of nature cold & drie. This Quarter taketh his beginning at the Sunnes entrance into the first scruple of Libra producing thereby a second Equinoctial, equalizing the daies and nights, and may wel be called our second Spring, being an ant and fit time to take phisicke, to bleed, &c. provided always you take advice of the learned. If Autumne be very moyst, Grapes will putrifie, & wines be very bad; if wett, want of Fruit; if hote, much sicknesse; if cold, then losse of Harvest.

The

The Diseases attending on this sickly season, bee paines in the backe, darknesse of sight, retension of Urine, fluxes of blood, with many infirmities in the face; as in the spring, Cankers, Fistulaes, with Emerald, Stone and Gravell, Fevers of blood, many impediments in the eyes; but God is all-sufficient to keepe us from all such, and the like, malignant maladies that come by surfeits. *Qui ante non cavet, post dolebit.*

To Know the Moone her comming to the South, And full Sea throughout *England*.

The ☽ age for her shining.		The ☽ her cōming to South.		The Moons Age.		*London Pinnot Hartlepoole.*		*Bristow.*		*Graues-end.*		*Barwick Ostend.*

15.	15	12.	0	15.	30	3.	0	6.	45	1.	30	3.	45

Note that the houre of the Moone comming to the South, is the time of full Sea at *Southampton*, *Quinborow*, and *Portsmouth*.

and foure in bredth, are an Acre by the statute, in which are contained 160. square Poles.

The square Poles are flat, in forme of a trencher, but the measure of Timber is Cubicall, because their square are in the forme of a Dye, every foote having in it 1728 Inches, onely in for Carpenters.

In a foot of board of glasse 144 square Inches; now to know how much of any bredth must be had in length for a foote, devide 144 the square inches, that are contained in one foote by the Inches contained in the bredth of the board of glasse: And the quotient sheweth how many Inches of that bredth in length for a foote: As for example, I have a piece of glasse 9 Inches in bredth by which 9 I devide 144, and the quotient 16, so much in length for that bredth must be had for a foot.

Iudgement of the Weather by the 28 Mansions of the Moone.

Mansion.	☽ ☌	☽ ☍	☽	quality.	Mansion.	☽ ☌	☽ ☍	☽	quality.

The Moon being in any of these 12 Houses, or Mansions, it is probable to be such weather as here is set downe, except the influence of the Moone be hindred, and her vertue expelled by the concurrence of stronger aspects, and more predominating Planets.

Minor est clarum vis semper maiori cedit.

Elections for Physicke and Chyrurgery, depending on the course of the Moone.

The body being filled with naughty and superfluous humours, then with the advise of the learned, it is convenient to bleede, bathe, &c. Cut not any veine, the Moone being in the signe, governing the member to be phlebotomied; neither when she or the Sun, or both, are with their enemies ♄ or ♂ but the ☽ or ☉ or both, one with another happily aspected, or with ♃ or ♀ in a good place of the heavens, in the morning after ☽ rising, rising, the aire temperate.

Let bloud the { Flegmaticke, Melancholick, Cholerick, Sanguine. } the Moon in { ♈ or ♓ ♎ or ♒ ♑ or ♉ either of these.

Againe let youth bloud from the new ☽ to the first quarter; middle age from the first quarter to the full; Elder from the last quarter to the change in the spring, or latter end of harvest, the ☽ not being in ♌ neither strong presently, purging violently, nor venery presently after, but in case of necessity, as pestilence, plurisie, &c. these rules not to be observed so strictly.

Prepare humours. Vomit. Purge by nestling. Take glisters. Gargarise. Stop rumes & flux. Bathe. Purge by electuary pills or potions. } The Moone being in { ♈ or ♌ ♉ or ♍ ♊ or ♎ ♋ or ♏ ♌ or ♐ ♍ or ♑ ♎ or ♒ ♏ or ♓ ♐ or ♈ ♑ or ♉ ♒ or ♊ ♓ or ♋ ♈ or ♌ ♉ or ♍ ♊ or ♎ ♋ or ♏ ♌ or ♐ ♍ or ♑ ♎ or ♒ ♏ or ♓ ♐ or ♈ ♑ or ♉ ♒ or ♊ ♓ or ♋

Comfort the vertues.	Attractive. Digestive. Retentive. Expulsive.	The Moon in	♈ or ♐ ♓ or ♎ ♑ or ♍ ♋ ♏ or ♓

Set saile the ☽ decreasing, swift in course, separating from a good aspect of Iupiter or Venus, or applyed to any of them well disposed, provided that shee be not placed under some tempestuous constellation, such as these Arcturus, Orion, Hiades, Pleyades Antares, the Bulseye, Dolphin, both Dog Stars, the Kidde & Goat, Argonavis, that is arising or angular with them, or ♄ or ♂ which if neglected, they may repent their over-selfe conceit, onelie in in refusing good counsel.

Further Cautions in Physicke.

Take no Physicke in the Dog-dayes, in the extreame heate of Summer, or cold of Winter, unlesse in dangerous diseases. A Purgation will purge ill humours best, when the Moone is in Cancer, Scorpio, or Prices, with an aspect of Venus.

It is bad purging when the Moone is in Leo.

Sup not to late at any time.

Rise betime, especially in the Spring and Summer.

Drinke before you wash in the morning.

Avoyd overmuch sleeping, or over-watching.

Retaine not over-long superfluous excrements.

Keep warme head, necke, feete in Autumne and winter.

Study, nor read much on a full stomacke.

A good signe of digestion to be cold present after meat.

Eate not much fruit in Autumne or Harvest.

Be moderate, not violent in your exercise.

It is better to eate with some intermission, than to eate much at once, because the stomacke by hasty eating may be clogged, and made so cold, as it will not be able to digest the meate.

Generall

Generall Rules of Husbandry.

Plant or graft, the Moon encreasing in Taurus or in Aquarius, the wind not North nor East: Remove yong trees, and set them in the last quarter of the ☽ in Taurus, or Capricorne, in September, October November, and February: Sow all manner of corne and graine the Moon encreasing, but in moyst in the decrease: Set or sow all manner of Seeds, the ☽ well seated in Aries, Taurus, Cancer, Virgo, Libra, Capricorne, Aquarius, Pisces, but the roots of your seeds being round, 3 or 4 dayes before or after full ☽, but for store take the encrease from February to June: Gather all kind of fruit neare the full ☽ in a dry time: and then also kill fat Swine for Bacon, sheere sheep in the encrease, also cut haire to grow again, but not to grow againe in the decrease: cut Vines in February, March, or September, the Moone encreasing in Aries, Libra, or Scorpio: Geld Cattel the Moone encreasing in Aries Sagittarius, Capricorne: destroy wormes, warts, corues, &c. in the last quarter of the ☽: Gather flowers and seeds for store at a ful ☽ the like for hearbs, first dry them in the shade, after in the sunne, about Lamas day, and hang them up in paper bags: weed gardens after a showre of raine; and set hearbes foure fingers breadth deepe in the earth, the roots before a little within them about: sow seedes in dry weather: The ancients teach this Lesson, to plow on Plow day, or 6 dayes before; to fallow 6 dayes before Vallentines day; to sow beanes and praseon St. Chads day, or 6 daies before; all manner of pulse and oates about the 10 of March, and so to continue for a month after: Sow barley 6 dayes before St Georges day; to fell timber 6 daies before Ascension, to plant hearbes and flowers before Midsummer: to cut downe meadowes and sheere sheepe 6 daies before St. James day; to reape Rye a little after Lammas,

mas, wheate before Bartholmew day, Barley at Nativity of Virgin Mary, and pease; to sow hempe and flaxe afore St. Wilfrids day, to carry it to the water neare St. Margrets day; and to beginne to reape about St. Mathews day; for drayning of Meddowes, and laying of them; your upland about the Anunciation of Mary, and your low ground at Midsummer.

To prevent Moales that eate the rootes of corne, in spring or fall; take the smoak of Gun-powder, or Assafettida, and perfume their haunts and walkes: Against Field Mice, take Arsenicke, Honey, and Lime, make it to a paste, and scatter it here and there about in the lands: Against field-rats, take Poppy seedes, bruised with wheate, therewith bait their holes: for Pismires, take the rootes of Gentian, and sprinkle the place where they beginne to build or resort; for snailes blacke or gray, take the corrupt dregs of strong train Oyle, mire it with ashes of Holly burnt, and sprinkle it about or on the corne, will kill the Snailes, and better the corne and ground: for Wormes, stirre your land in the hottest of Summer, it will also kill weeds and thistles; then take Oxe dung and urine, burne it and fume the ground, this is a present remedy: Against lightning, bury a hedge-toad, Newt, or any venemous thing in any part of the corne-field, closed in some stone Vessell, well luted up, that no vapour may enter in; or else sticke Holly or Iuy-bushes in every corner of the field; from thunder great noyses are good, but principally make fires of the rotten staddles of stacks, or most stinking things you can get to burne in divers places: Against frost nothing better than the rotten litter taken from under the horses feete; spread on the corne, horse-dung dryed and scattered upon the land, or the manure of Pullen: Against Mists, Fogg, and ill vapours, make divers blazing fires, of dry fuell, to purge the aire; the best is dryed Hemlocke, dry dung,

staddle,

saddle, &c. Against Haile and Stormes, Tempest, take Bats, owles, house-cats, sit them upon stakes in corners of the field: for Planet-stroken, take the shaving of any horne, mixe it with Horse-dung, or Ore-dung, and burne it in divers places of the field; to preserve corne in the house being threshe, is to reape it at the change of the D in then it is fullest, and not subiect to putrifaction; but if it need further helpe, take Arsenicke and Mercury, sublimate, and close it fast in bagges of leather, and hang it nere your garners; Oyle Lees cast upon corne will do the same, so will the powder of Chaulke, dried wormewood, the dryed leaves of Yew, Cipres, or vinegar and Lacerptium mixt, and sprinkled in a moderate manner, preserveth all manner of Pulse: take also your salt-fish vessels, inwardly well daubed with plaster, or pitch barrels sprinkled with vineger; or Oyle barrels, dryed and daubed as before; for want of plaster daube them with Pitch, and Soape, and Ashes, or Lime, Vinegar, and Soape-ashes, or the dryed hurth, chest, or bing of drye Oake wood, being well seasoned, will keepe corne a hundred yeares without putrifaction, and where they are not to be got, there, if the soyle be dry, and without moysture, as in rocks, sides, or wet springs abound not there handsome and close caves made in the earth and covered, so as the aire may not enter, will keepe corne long and sound without taint.

Eclipses.

FOure times this yeare will the bright Lampes of Heaven be in part deprived of their light to the inhabitants of the Earth, the Sunne twice, and the Moone twice: one onely of the Sunne will be visible to us in London, which will bee on the 22 of May, being wednesday, if not clowdy: the beginning of the same will be about 42 clocke, 12 minutes after noone: the greatest obscurity till a little after 52 clocke, and the end a quarter after 62 clocke: The poynts Eclipsed in the middle thereof will be 8 and 42 minutes.

For

For a yeere, or any time under calculated, after the Rate of Eight pound in the Hundred.

The Vse of the former Tables.

If you desire to know what Interest is due upon any Summe of money any time desired in these Tables, seek

the

the summe on the sides of the Tables, and the time on the heads of the Tables, and in the angle or place of meeting you have the summe desired, in pounds shillings, pence, & parts of pence as the Titles above shew: And note that 25 of those parts make a penny.

Example.

I would know what interest is due upon 7 pounds for five moneths, therefore I seeke for 7 on the left hand of the first table, where it is titled with pounds; and from that 7 I guide mine eye in a right line, untill I come under 5. the number of moneths, and in that place of meeting is 4 shillings 8 pence, which is the full summe due for 7 pounds in 5 moneths.

But if you would know what interest is due upon 17 pounds for five moneths, then I seeke on the side of the table for 10 pounds, and see what interest is due upon 10 pounds, the summe aforesaid, which in this table is found to be 6 shillings 8 pence, which being added to the summe 4 shillings 8 pence, will be 11 shillings 4 pence, the interest due upon 17 pounds for five Moneths.

Also I would know what interest is due upon 17 shillings for 8 moneths: I seeke in the table for 10 and 7 against shillings, and under 8 moneths against 10 is 6 pence, and 10 parts of a peny also against 7 is 4 pence, and 12 parts of a peny, adde these two summes together, and the product will be 10 pence and 22 parts of such a penny of 25 parts: whereupon I conclude the interest to be due upon 17 shillings, for 8 Moneths is almost a 11 pence. Thus may you doe with any other summe, as if the summe were 56 pounds: first see by the tables what is due upon 50 pounds, your time desired, and what is due upon 6 pounds, by adding these two sums together you have your desire.

Scientia non habet inimicum nisi ignorantem.

Wouldst

Would'st thou know a true accompt,
Of Comming in, and layings out,
Observe this Table thou shall finde,
All things stirring to thy minde.
